Kilambi Research Working Paper No. KR-WP-2026-27

Visible Money, Invisible Counterparties: The Financing Ecosystem of the AI Infrastructure Buildout

Kilambi Research

October 2026

Abstract. This paper maps the financing of the current AI data center buildout from primary records: county land records in more than fifteen counties, SEC bulk datasets (22.0 million Form N-PORT holding rows and 216,921 Form D issuer rows), issuer filings, appraisal rolls and entity registries, assembled into a 1,495-document archive covering 29 campuses. Three results stand out. First, of USD 1,165.00B in uncommenced lease obligations across seven issuers, USD 38.85B (3.3 percent) can be attributed to a named counterparty from public records; the unattributed remainder is structural, because leases are not recorded instruments and none of the seven issuers files a data center lease as an exhibit. Second, the debt layer is documented in size where the lease layer is not: a USD 1,400M bank facility behind Galaxy Digital's Helios campus is sized from the credit agreement filed as an SEC exhibit; QTS carries USD 4,646.2M of indexed deeds of trust in one Virginia county; hyperscalers bought land for cash (Amazon, about USD 3,080M of deed consideration across two Virginia counties) and record no mortgage debt, while operators carry the recorded debt. Third, holder visibility is regime-specific: SEC-registered funds report 36.5 percent of the largest project bond issue and 3.33 percent of the second, and the insurer layer sits behind a paywall this study reports but does not cross.

Keywords: data center finance; project finance; off-balance-sheet leases; Rule 144A; Form N-PORT; private credit; land records

JEL Classification: G23, G32, L86

Non-technical summary. Data centers for artificial intelligence are being built at a pace that requires hundreds of billions of dollars, and much of that money is raised by private companies and special-purpose vehicles rather than by the large technology firms whose names are on the buildings. This paper asks a simple question: if a reader works only from public records, how much of this financing can be traced to the party that ultimately owes or holds it? The answer differs sharply by layer. Land purchases are recorded at the county level and can be followed parcel by parcel. Mortgages and deeds of trust are recorded too, and they show a consistent pattern: the technology firms buy land with cash, and the specialist operators who run the buildings carry the mortgage debt. Bonds issued by project vehicles can be sized exactly, and one bank loan behind a Texas campus is documented in full because the borrower had to file its credit agreement with the SEC. The lease layer is different. The seven largest issuers report about USD 1.17 trillion of lease obligations that have not yet started, and public records name the counterparty for only 3.3 percent of that total. The paper shows that this gap is not a failure of searching: no public register records lease counterparties, and no issuer files these leases. The paper also maps who holds the bonds that can be seen, where the records stop, and what each remaining wall costs.

1 Introduction

The AI infrastructure buildout is financed in layers, and the layers differ in how visible they are to an outside reader. A campus begins as land, assembled parcel by parcel and recorded at a county courthouse. It is then financed: by bank facilities negotiated with agents and syndicates, by notes issued from special-purpose vehicles (SPVs) under Rule 144A, by securitizations of operator cash flows, by conduit bond structures that exist to move tax treatment rather than to raise market debt, and by leases, the layer at which the hyperscale tenant's obligation actually sits. Each layer leaves a different public trace. This paper reconstructs the financing structure from those traces, campus by campus and instrument by instrument, and reports the depth reached at each layer with the evidence grade attached.

The paper's central finding is an asymmetry. The money is visible: issue sizes, coupons, recorded mortgage amounts, appraised values and drawn balances are documented in this paper to the dollar where the record states them. The counterparties at the lease layer are not. Across seven issuers (Microsoft, Meta, Oracle, Amazon, Alphabet, CoreWeave and NVIDIA), uncommenced lease obligations total USD 1,165.00B on the measurement basis of Kilambi Research (2026a); USD 38.85B (3.3 percent) carries a Strong attribution to a named lessor or campus vehicle, USD 14.00B (1.2 percent) a Plausible attribution, and USD 1,112.15B (95.5 percent) no attribution in any public record located (Reconstructed, A). Section 6.1 shows that the unattributed share is a property of the disclosure regime rather than of the search: leases are not recorded instruments in any county searched, lease memoranda omit rent, and zero of the seven issuers file a data center lease as an exhibit to a periodic report.

Three further findings organize the paper. First, the county layer inverts the usual picture of who borrows. Hyperscalers buy land for cash and record no mortgage debt: Amazon records about USD 1,290M of deed consideration in Loudoun County, Virginia and about USD 1,790M in Prince William County, Virginia, with no deed of trust under any Amazon name in either county (Observed, A). Operators carry the recorded debt: QTS's deeds of trust in Prince William County total USD 4,646.2M in indexed consideration, and Vantage's Ohio campus mortgage moved from Wells Fargo (USD 3,100.0M, October 2024) to First Citizens Bank (USD 2,377.5M, April 2025) in a same-day release and replacement that only the recorder sequence reveals. Where hyperscaler tenancy touches the recorded layer at all, it does so through landlord-side loans and subordination agreements, documented in Section 6.3.

Second, the bond layer is documented at security level. The three project SPV note issues at the center of the record (Beignet Investor LLC, USD 27,294M at 6.581 percent due 2049; Sopaipilla Investor LLC, USD 12,550M at 7.534 percent due 2048; Galaxy Helios Data Centers II LLC, USD 3,507M at 9.875 percent due 2031) are private placements with no official statements, and their holders are visible only through the filings of SEC-registered funds. The bulk Form N-PORT population shows registered funds holding 36.5 percent of the Beignet issue, 3.33 percent of Sopaipilla and 5.26 percent of the Helios notes, so the same instrument class is one-third visible in one case and one-twentieth visible in another (Section 6.7). A complete inventory of every security in the bulk record, 871 as-filed rows across 117 distinct CUSIPs, is reproduced in Appendix B.

Third, depth itself varies and is reported as a result. One facility in the record is documented to covenant level, because Galaxy Digital filed the executed credit agreement as an exhibit: the Helios facility is a USD 1,400M senior secured term loan (1-month Term SOFR with a 2.5 percent floor, plus 4.75 percent; minimum debt service coverage 1.40; maximum loan-to-cost 80 percent; maturity 15 August 2028), drawn to USD 1,300M by 30 June 2026 (Observed, A). Other facilities of far larger

reported size (a USD 38,000M bank package for the Stargate Frontier and Lighthouse campuses; an approximately USD 18,000M construction facility for Project Jupiter) rest on reporting at grades B and C, and no recorded instrument in the record states their amounts. Section 7 inventories every wall met, with its price where a price exists, and Section 8 ranks what remains unknown.

The paper is a measurement exercise. It makes no recommendation on any security, and it treats a verified null (a searched source that cannot contain the fact, or that was searched and does not) as a result of the same standing as a finding.

The rest of the paper proceeds as follows. Section 2 describes the financing structures and the disclosure regimes that govern their visibility. Section 3 places the exercise in the literature on off-balance-sheet financing and securitization. Section 4 describes the archive and Section 5 the attribution rules and evidence grading. Section 6 presents the results layer by layer: leases, land, recorded debt, bonds, the Helios case study, the timeline, the holders, and the county inversion. Section 7 states limitations, the access map and the corrections applied to the record during the work. Section 8 lists open questions and falsifiers, and Section 9 concludes.

2 Institutional background

2.1 The financing stack of a hyperscale campus

A large AI campus is typically developed by a sponsor (an operator such as Vantage, QTS, Aligned, Compass or STACK, a developer such as Related Digital, or a hyperscaler's own vehicle) on land held by a project-level LLC. The capital stack combines some or all of the following, each of which appears in this paper's record.

Land and assembly. Land is bought through deeds recorded at the county. Assembly is frequently intermediated: in central Ohio, MBJ Holdings LLC appears as the upstream seller to Amazon, QTS and the vehicle that holds Google's campus, and Sidecat LLC holds 35 parcels (1,706.7 acres, USD 942.7M market value) on the landlord side of the Vantage Ohio campus. The recorded price is deed consideration where the index states it; assessed values come from the appraisal layer and are a different quantity (Section 6.2).

Bank facilities. Construction and mini-perm facilities are negotiated privately, arranged by lead banks and documented in credit agreements that are almost never public. The exception in this record is dispositive: Galaxy Digital, as a public registrant, filed the Helios credit agreement as Exhibit 10.1 to a Form 8-K/A (Galaxy Digital Inc., 2025). Recorded deeds of trust and mortgages give the county-level shadow of bank debt: the instrument is recorded, but in most counties the index states no amount; the Virginia and Ohio indexes used here are the exception set that does state consideration.

Project SPV notes. The largest single-campus financings in the record are notes issued by bankruptcy-remote SPVs whose only asset is the campus and whose only income is the hyperscaler lease: Beignet Investor LLC for Meta's Hyperion campus in Richland Parish, Louisiana; Sopaipilla Investor LLC for Meta's El Paso campus; Galaxy Helios Data Centers II LLC for the second phase of the Helios campus in Dickens County, Texas. All three are Rule 144A placements (with Regulation S tranches), which means no SEC registration, no official statement, and no listing on EMMA. Pricing is correspondingly institutional: the Beignet notes carry an S&P rating of A+ on the strength of

the Meta lease and guarantee structure; the Helios notes, backed by a merchant-exposed lease to CoreWeave, price at 9.875 percent.

Operator securitization. Established operators issue asset-backed securities against portfolios of stabilized campuses (Aligned, Compass, QTS, STACK, Vantage and Sabey shelves appear in the holder record). ABS tranches are long-dated (final maturities of 2046 to 2056 in the tranches funds report) and carry coupons well below the project SPV notes, a spread documented in Section 6.4.

Conduit and tax structures. Two structures in the record exist for tax treatment rather than market funding. Industrial revenue bonds (IRBs) issued by Doña Ana County for Project Jupiter carry an authorized ceiling of USD 165,000M across three series, and every series was purchased by an affiliate of the project: the bonds move title to the county and support the abatement, and the ceiling is not debt (OBSERVED, A) (Ordinance 367-2025, instrument 2520581; deeds and leasebacks at instruments 2525203–2525250) (Doña Ana County Clerk, 2026). Port KC's authorization of up to USD 10,000M for Project Mica in Kansas City is the same class of instrument, and no series had been issued as of the August 2026 board agendas. A third legacy structure appears once: a synthetic lease for a Google campus in Armstrong County, Texas (BA Leasing BSC LLC as lessor, Bank of America as administrative agent), originated October 2025 and terminated in May to June 2026.

The lease. The hyperscaler's obligation sits in a lease between the tenant (or its subsidiary) and the SPV or operator. The lease is the cash-flow source for every layer above, and it is the layer with no public register, which is the subject of Section 6.1.

2.2 Why visibility differs by layer

Four regimes determine what an outside reader can see. (i) *County recording* covers deeds, mortgages, deeds of trust, assignments, releases and, in some counties, lease memoranda; memoranda state parties and term but omit rent. (ii) *SEC issuer disclosure* covers the seven issuers' aggregate lease obligations under FASB Topic 842 (Financial Accounting Standards Board, 2016), which requires totals, not counterparty names; Regulation S-K Item 601(b)(10) treats leases as ordinary-course and does not require them as exhibits, and in the event zero of the seven issuers file a data center lease as an exhibit. (iii) *Fund disclosure* (Form N-PORT) covers SEC-registered funds' holdings security by security, which is the only systematic window into 144A note holders; it does not cover insurers, private funds, bank portfolios or offshore vehicles, and Form 13F cannot substitute because non-convertible straight debt is not a Section 13(f) security. (iv) *Rating-agency presales* (KBRA, S&P, Moody's) contain the richest single-document accounts of SPV structures (rent, guarantees, sponsor equity) and sit behind registration or login walls; where this paper uses a presale figure it is graded B and the route is stated.

Two corollaries follow and recur throughout. EMMA, the municipal disclosure repository, is empty for every core issue by construction: 144A placements and affiliate-purchased IRBs carry no official statement and no Rule 15c2-12 undertaking (Municipal Securities Rulemaking Board, 2026). And interconnection queues, often used as a proxy for buildout, cannot evidence campus financing: ERCOT and PJM publish generation queues only, MISO's queue carries no customer field, and SPP's export carries no sponsor field (Section 7).

3 Related literature

This paper sits in three literatures. The first is the literature on off-balance-sheet financing and securitization without risk transfer. Acharya et al. (2013) show that pre-crisis securitization frequently left risk with the sponsor while removing assets from the balance sheet; the structures in this record differ in that the lease obligations are disclosed in aggregate by the tenants, and what is missing is the counterparty mapping rather than the obligation itself. Gorton and Metrick (2012) describe the repo-funded shadow banking system whose opacity became visible only under stress; the parallel here is narrower and is stated as such: a class of institutional debt (144A project notes) trades and is held in size with holder disclosure that depends entirely on the regulatory status of the holder.

The second literature concerns the investor base for long-dated private debt. Hanson et al. (2015) model banks as patient investors in fixed-income assets; in this record the patient holders of campus debt are insurance general accounts and private vehicles, which are precisely the classes outside the N-PORT window, while registered funds hold a minority slice that varies by issue from 3.33 to 36.5 percent. The paper's holder measurements are, to our knowledge, the first population-level (rather than sampled) N-PORT tabulations for these issues; the bulk datasets make the population computable for the first time (U.S. Securities and Exchange Commission, 2026b).

The third literature is the working-paper series this paper extends. Kilambi Research (2026a) constructed the USD 1,165.00B uncommenced-lease aggregate for seven issuers and compared the buildout's financing structures with six historical episodes of hidden leverage. An interim attribution study (Kilambi Research, 2026b) was withdrawn on 12 October 2026 after a scope review concluded that the lease layer is one layer of a wider financing structure; this paper is the replacement, built from a completed research phase (Phase 1), a separate analysis phase over the full archive (Phase 2), and only then drafted (Phase 3). The withdrawal and the corrections it produced are documented in Section 7, because a record that corrects itself in public is part of the measurement.

4 Data

The evidence base is an archive of 1,495 documents assembled in Phase 1 of this project, covering 29 campuses and three expansion clusters, plus the bulk datasets listed in Appendix A. A Phase 2 reconciliation accounts for every archived document: all 1,495 are cited in the analysis workpapers (3,001 document-to-memo assignments), all are present on disk and non-empty, and a full re-hash found 1,495 distinct checksums with no collisions; the count of documents not used is zero in every reason category. The bulk layer comprises 5,999 files, of which 121 are individually inventoried datasets and extracts and the remainder are raw captures and tooling artifacts, each classified in the reconciliation.

Table 1 summarizes the record. Three data families do most of the work. *Filings*: periodic reports, registration statements and exhibits for the seven issuers and for the public lessors and BDC holders, pulled from EDGAR under the declared identity "Kilambi Research"; the single most productive document in the archive is a credit agreement filed as an exhibit (Galaxy Digital Inc., 2025). *County and appraisal records*: recorder indexes in more than fifteen counties (four of them behind free registered accounts created for this project), appraisal-district bulk rolls in eight jurisdictions, and parcel files obtained in bulk where the county publishes them. *SEC bulk datasets*: Form N-PORT filing quarters 2024q1 to 2026q3 (22,021,526 holding rows in the four recent quarters; 41,348,748

rows in the history extension) and Form D quarters 2023q1 to 2026q3 (216,921 issuer rows) (U.S. Securities and Exchange Commission, 2026b,a).

Table 1. The record: coverage and scale

Item	Count
Archived source documents (all accounted for in Phase 2)	1,495
Campuses in the coverage matrix	29
Source categories per campus	12
Coverage cells (campuses × categories)	348
Cells with findings / covered nulls / not attempted / not applicable	121 / 60 / 155 / 12
Counties with recorder pulls (incl. registered-account pulls)	15+
Jurisdictions with bulk appraisal or parcel data	8
Form N-PORT holding rows scanned (2025q4–2026q3)	22,021,526
Form N-PORT hit rows on the financing perimeter	11,997
Distinct securities in the inventory (Appendix B)	871 rows / 117 CUSIPs
Form D issuer rows scanned (2023q1–2026q3)	216,921
Entities checked in the LEI registry (GLEIF)	32
Measurement date of the lease ledger	30 June 2026

Notes: A covered null is a category searched with a documented query that returned nothing; it is a result, not a gap. The 155 not-attempted cells are the coverage debt listed as open question Q14 in Section 8; the expanded county search re-scored the deeds category from 1 finding and 26 not attempted to 16 findings, 2 covered nulls, 6 blocked, 3 not attempted and 2 not applicable. Source: Phase 2 coverage reconciliation and campus coverage grid (project workpapers).

Definitions matter at three points and are fixed here. *Uncommenced lease obligations* are the Kilambi Research (2026a) endpoints, not the issuers' Topic 842 "not yet commenced" lines; the two differ materially (Meta USD 103.77B on the 10-K line against USD 279.0B on the paper-24 basis; CoreWeave USD 38.5B on its FY2025 10-K line (CoreWeave, Inc., 2026a) against USD 35.5B), and every figure in Section 6.1 is on the paper-24 basis. *Indexed consideration* is the amount stated in a county index for a recorded instrument: it is the recorded face amount, not a drawn balance, and sequential instruments may refinance the same facility, so indexed amounts across dates are not a stock of debt. *Assessed* and *appraised* values are tax-roll quantities from the appraisal layer; they are not transaction prices, and on abated parcels the taxable net can collapse to roughly land value while the market value stands far higher.

Data vintages are stated where they bind: the N-PORT bulk sets freeze at filings made through about 30 September 2026; the Oregon pension holdings file is the 2025 edition (the 30 June 2026 edition was not yet published); county pulls were executed in October 2026 and are current to each county's certification date.

5 Methodology

5.1 Attribution rules for the lease ledger

Each issuer's uncommenced total is assigned to one of three buckets. *Strong*: a public document names the lessor, the campus vehicle or the lessee entity and states lease dollars (a lessor's filing, a

presale, or an issuer disclosure that ties dollars to an identified structure). *Plausible*: the campus structure is documented and a dollar figure exists for the associated financing, but the lease's own dollars are undisclosed, so the financing figure is used as a labelled floor proxy; the ledger contains exactly one such item (Saline, Section 6.1). *Unattributed*: no public document located ties dollars to a counterparty. Identity without dollars does not attribute: Project Jupiter and Stargate Abilene both have fully documented SPV and recorded-instrument maps and USD 0 attributed, because no source states the lease's dollars.

5.2 Evidence grading

Every reported number carries the house provenance and quality tags. Provenance is one of Observed (taken directly from a published source), Reconstructed (computed from source data), Modelled, or Assumed. Quality is A (official or primary source), B (reputable secondary or official summary), or C (press or provisional). Workpaper grades D (unverified) appear in the archive but no D-grade figure is used in this paper's tables. Where two figures conflict, the correction register (Section 7) states which governs; the standing rules are that bulk populations govern over samples, and that saved filing excerpts govern over any workstream summary, including this project's own.

5.3 The N-PORT holder method

Holder totals are computed from the bulk N-PORT datasets, not from sampled filings. For each security, the population is every registered-fund series reporting the CUSIP (or, where filers used placeholder identifiers, every identifier the record ties to the issue), at each series' latest report period in the freeze window. Identification must be by CUSIP or identifier, not by issuer name: funds reported USD 7,488.2M of the Beignet issue at 30 September 2025 under a pseudo-CUSIP (990AAXQG4) and two further placeholder identifiers, before the notes' stated issue date, and a name-based or headline-CUSIP search misses that positioning entirely (Observed, A). The Reg S tranche of the same issue (U06930AA6) returns zero rows, as expected for an offshore tranche. N-PORT covers registered funds only; a low N-PORT total is a statement about the registered-fund slice, never about total ownership (this caveat is part of every holder figure in Section 6.7).

5.4 The county method

Recorder pulls were executed party-name by party-name for every campus entity and its known vehicles, over each portal's full date range, recording instrument numbers for every hit used. Two method findings from the pulls are load-bearing. Entity-name searching produces false nulls: Google's Franklin County campus sits under Montauk Innovations LLC (owner-name searches for "Google" return zero parcels and zero instruments beyond two notices of commencement), and Digital Realty's Prince William assets sit under Digital Carver and Digital Second Man vehicles while the exact name returns a clean null. Vehicle identification therefore rests on the transfer register, the parcel layer and press confirmation, and is labelled inference wherever it is used. And a county index is a record of instruments, not of facilities: the Helios deed of trust in Dickens County names the borrower, the trustee and the agent and states no amount anywhere (Section 6.5).

5.5 Null taxonomy

The paper distinguishes three kinds of nothing. A *covered null* is a searched category with a documented query and no result (for example, SB Energy, OpenAI and NVIDIA return no instruments in Pike County, Ohio). A *null by construction* is a source that cannot contain the fact by design (EMMA for 144A issues; interconnection queues for load; 13F for straight debt; a county index for lease rent). A *blocked* category is one attempted and stopped by a paywall, a registration wall or a technical failure; every blocked category in this project is inventoried with its price or failure mode in Section 7. Conflating the three is the most common error in work of this kind, and the coverage grid in the workpapers scores all 348 cells on this taxonomy.

6 Results

Table 2 collects the headline measurements. The subsections take the layers in the order a campus is built: the lease obligation, the land, the recorded debt, the market debt, and the holders.

Table 2. Main results

Measurement	Value
Uncommenced lease obligations, seven issuers (30 June 2026)	USD 1,165.00B
Strong attribution	USD 38.85B (3.3%)
Plausible attribution	USD 14.00B (1.2%)
Unattributed	USD 1,112.15B (95.5%)
Issuers filing a data center lease as an exhibit	0 of 7
Helios Credit Agreement facility (sized from the filed agreement)	USD 1,400M
Drawn at 30 June 2026	USD 1,300M
QTS deeds of trust, Prince William County (indexed total)	USD 4,646.2M
Amazon deed consideration, Loudoun + Prince William (no deeds of trust)	about USD 3,080M
CoreWeave total indebtedness, 30 June 2026 (principal)	USD 35.6B
Registered-fund visibility: Beignet / Sopaipilla / Helios notes	36.5% / 3.33% / 5.26%
Beignet positioning reported before the issue date (30 Sep 2025)	USD 7,488.2M
Project Jupiter IRB authorized ceiling (affiliate-purchased; not debt)	USD 165,000M
Project Mica bonds authorized / issued	USD 10,000M / USD 0

Notes: Each figure is developed, with its evidence grade and source, in the section cited in the text. The lease ledger is on the Kilambi Research (2026a) measurement basis (Section 4). Source: Phase 2 analysis memos (project workpapers) and the primary sources cited therein.

6.1 The lease layer: obligations without counterparties

Table 3 and Figure 1 present the attribution ledger. The total is USD 1,165.00B. The Strong bucket (USD 38.85B) has five components, each a case where a lessor-side or presale document states lease dollars for an identified structure: Meta's Hyperion lease through the Beignet structure (USD 12.31B, the largest single Strong item, with a residual-value guarantee of about USD 28B declining and maximum exposure of USD 46.03B in Meta's Q2 2026 10-Q); CoreWeave's leases at Applied Digital (USD 11.00B), Galaxy Helios (USD 10.40B of minimum contracted payments for Phase II), Digital Drive (USD 2.94B) and Elk Grove (USD 2.20B). The Plausible bucket is one item: Saline, USD 14.00B, which is the note principal of the Related Digital Michigan financing used as a floor proxy for four undisclosed triple-net leases to Oracle America Cloud Services LLC, guaranteed by Oracle Corporation (KBRA, 2026) (the condominium and counterparty structure is Washtenaw County Register of Deeds Docs 6800224-27) (Washtenaw County Register of Deeds, 2026); it is labelled a proxy wherever it appears, and it is the only Plausible item in a USD 1,165B ledger.

Table 3. Uncommenced lease obligations and attribution, by issuer (USD billions)

Issuer	Total	Strong	Plausible	Unattributed	Attributed items
Microsoft	329.10	0	0	329.10	none
Meta	279.00	12.31	0	266.69	Beignet / Hyperion
Oracle	274.00	0	14.00	260.00	Saline (proxy)
Amazon	137.20	0	0	137.20	none
Alphabet	85.20	0	0	85.20	none
CoreWeave	35.50	26.54	0	8.96	APLD; Helios; Digital Drive; Elk Grove
NVIDIA	25.00	0	0	25.00	none
Total	1,165.00	38.85	14.00	1,112.15	
Share	100%	3.3%	1.2%	95.5%	

Notes: Measurement date 30 June 2026; totals on the Kilambi Research (2026a) basis. Strong components sum exactly: 12.31 + 11.00 + 10.40 + 2.94 + 2.20 = 38.85. Saline's USD 14.00B is note principal used as a floor proxy for undisclosed leases, not a lease figure (evidence grade B for the structure, C for the proxy use). Sopaipilla is excluded from Meta's total on timing: the joint venture was announced 28 July 2026, after the measurement date, and USD 12,550M is bond principal, not the undisclosed lease commitment. Source: Phase 2 attribution ledger (project workpapers).

The Phase 1 expansion (fifteen-plus county pulls, eight bulk appraisal jurisdictions, the full N-PORT and Form D populations, four power-queue systems and the LEI registry) changed this ledger's dollar figures by zero, and the reasons are structural rather than remediable. County recorders record deeds, mortgages and lease memoranda; no pull in the record, free, registered or bulk, returns a lease's dollar amount, because the instruments do not state one. The filing-side expansion (N-PORT bulk, BDC schedules, pension files) measures debt holders and funders, not lessees. What the expansion changed is the standing of the null: for the campuses covered, the record now shows where the money is instead (Sections 6.2 to 6.7), so the unattributed USD 1,112.15B is documented as unrecorded, not merely unsearched.

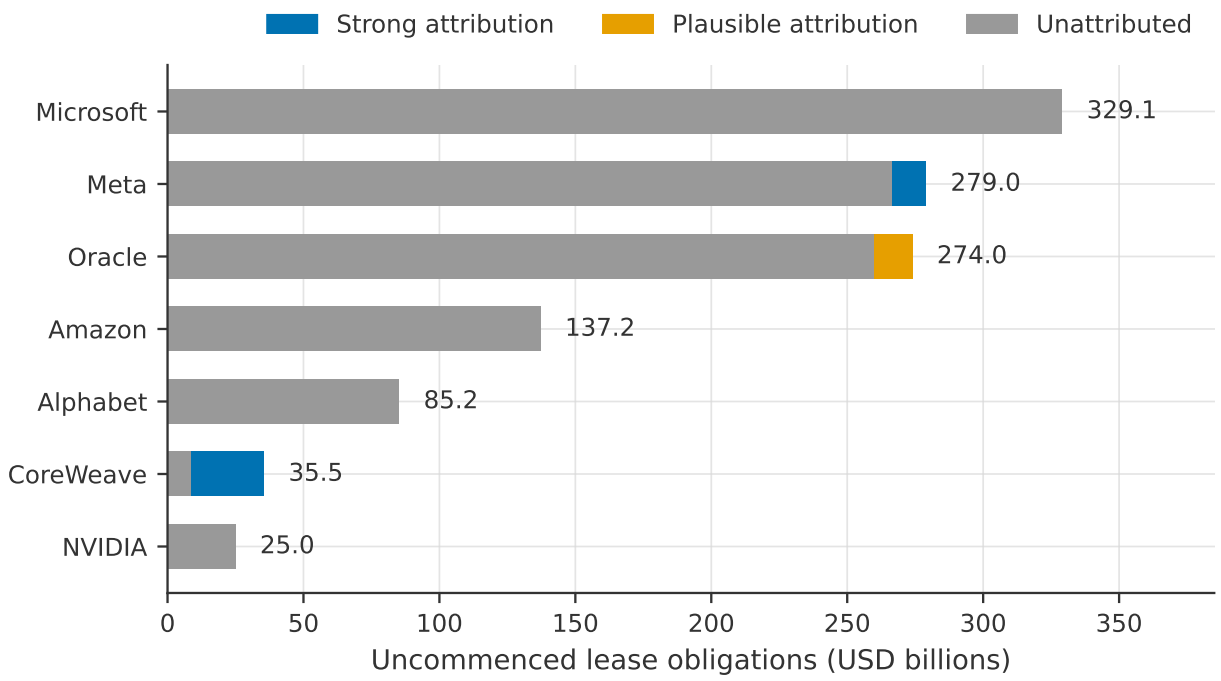

Figure 1. Uncommenced lease obligations by issuer, split by attribution status

Source: Table 3. Note: Segment order within each bar is unattributed, then plausible, then strong; bar-end labels are issuer totals in USD billions. Only Meta and CoreWeave carry Strong attributions, and only Oracle carries a Plausible one.

One filing-side subtlety belongs in the paper rather than a footnote. CoreWeave's Q2 2026 Form 10-Q discloses executed but uncommenced leases with estimated future undiscounted payments of USD 35.5B at 30 June 2026, exactly this ledger's CoreWeave line (CoreWeave, Inc., 2026b). The same filing states that the total excludes lease arrangements whose payments depend on lessor construction costs. The unnamed single-site lease in that excluded category tracks Galaxy's Helios phases megawatt for megawatt in CoreWeave's own disclosure (133 MW at USD 3.8B to 4.8B in Q1 2025 reporting, expanding to 393 MW at USD 13.5B to 14.4B over 16 years, contractual maximum USD 14.7B, all 393 MW undelivered at 30 June 2026), and the identification of the unnamed lease as Helios is by that correspondence only and is labelled inference. The aggregate reconciles; the largest identified single lease is not in it. Both facts are needed to read either number.

Two timing disciplines bind the ledger. It is measured at 30 June 2026, and the one dated post-period structure (Meta's Sopaipilla joint venture, announced 28 July 2026) is excluded from Meta's total even though its bonds appear in the holder analysis, which is not date-bound in the same way. And the ledger's basis is the Kilambi Research (2026a) construction throughout: NVIDIA's line carries a USD 2.3B definition gap against its 10-K window (USD 25.0B against USD 22.7B), recorded as unresolved conflict D3 in the register and flagged here rather than resolved by preference.

6.2 The land layer: deeds, parcels and appraisals

The land layer is the deepest in the record, because it is the layer the state records instrument by instrument. Its contents fall into four groups.

Hyperscaler cash purchases. Amazon's two Virginia counties are the fullest case. In Loudoun, 244 index entries include 15 deeds totalling about USD 1,290M of gross consideration (largest: USD 427,299,350 from George Washington University, 2 March 2026; USD 195.0M from Luck Stone Corp; USD 155.0M from Creighton Newco; USD 145,973,319.66 from Quail Ridge) (Loudoun County Clerk of Circuit Court, 2026). In Prince William, 216 hits include 20 data-center deeds totalling about USD 1,790M of verified consideration (largest: USD 700.0M on 5 November 2025, about 119 acres) (Prince William County Clerk of Circuit Court, 2026). Microsoft's pattern matches at smaller scale: two Loudoun deeds (USD 93,716,210 in 2020; USD 15,001,774.59 in 2023) and six Prince William deeds totalling USD 592,483,577 (largest USD 440,510,625, February 2024). No deed of trust, mortgage or lease appears under any of these names in either county (the recorded-debt consequence is Section 6.8).

Vehicle-held campuses. Where the hyperscaler does not hold title in its own name, the land layer is recoverable but only by joining sources. Google's Franklin County campus is held by Montauk Innovations LLC: the Auditor's bulk polygon file shows one parcel (222-004984, 5266 Babbitt Rd, 221.90 acres) appraised at USD 235,368,300 for 2025 (land USD 27,760,800; buildings USD 207,607,500), the conveyance register dates the acquisition to 13 December 2018 at USD 27,428,115 through the MBJ Holdings chain, and the recorder shows 15 Montauk instruments (construction notices of commencement naming Holder Construction and 3C Contracting; easements to Ohio Power Co and the City of New Albany) and no mortgage or lease (Franklin County Recorder, 2026). The identification of Montauk as Google's vehicle rests on press confirmation (Bloomberg Tax, Data Center Dynamics, Columbus Dispatch, June 2025) and is labelled inference (RECONSTRUCTED, B). Meta's El Paso campus is held by Wurldwide LLC (d/b/a Statue LLC), which bought 1,038.95 acres from the City of El Paso for USD 8.5M (closed 29 December 2023); the appraisal district's bulk file shows exactly two parcels, USD 5,430,789 of land and USD 0 of improvements in 2026, and the county index contains no record under the name "Sopaipilla" at all (El Paso County Clerk, 2026).

Assembly intermediaries. The Ohio record names the layer between farmland and campus. MBJ Holdings LLC is the common upstream seller (to Amazon in Licking County, to QTS in Franklin County, and in the Montauk chain) and is still assembling: 82 parcels and 772.21 acres in the Licking GIS layer (USD 58.5M market), including 146.77 acres acquired 26 May 2026 for USD 12,915,760. Sidecat LLC holds 35 parcels and 1,706.70 acres (USD 942.7M market value; USD 204.0M taxable net) and appears as landlord-side co-party on the Vantage OH11 mortgage set. Intel's Licking County chain runs through Growth Site LLC and Growth Site II LLC with Intel Corporation as member; the vehicles now own zero parcels, the full 835.15 acres (USD 139.5M market) having been conveyed to Intel, and no mortgage or lease appears (Licking County Recorder, 2026).

Appraised values against recorded debt. The appraisal layer's sharpest single datum is the Vantage OH11 parcel in Licking County (095-111756-00.009, 58.057 acres): assessed at USD 11,723,200 (land USD 11,610,000; improvements USD 113,200) against recorded mortgages of USD 3,100.0M (2024) and USD 2,377.5M (2025) on the same campus (Licking County Recorder, 2026). The divergence is a valuation-basis fact, not an error: the county carries the parcel at land-only value while the recorded debt prices the built campus and its lease. The same pattern, at portfolio scale, is Microsoft's Mount Pleasant, Wisconsin campus: the Village assessor's 2026 figure of USD 1,872,775,500 (land USD 87,625,700; buildings USD 1,785,149,800) governs over the county-roll USD 1,098,564,300 for 29 parcels and 2,119.97 acres in the state bulk file, and a new 791.08-acre Durand Ave parcel carries no value yet. At the other extreme, the Dickens County roll carries Galaxy Helios III at USD 237,420 of land only for 2024 to 2026, down from USD 6,340,900 in 2023, on the campus whose filings document USD 1,400M of bank debt and USD 3,507M of notes; and the Taylor County roll for Stargate Abilene carries Lancium Abilene's seven building and power lots at USD 1,324,847,141 plus about USD 6.13B of business personal property, including Oracle America Inc computer equipment at USD 3,428,918,161 (Taylor County Appraisal District, 2026). Assessed value is a tax quantity; the paper uses it as evidence of footprint and timing, never as a price.

6.3 Recorded debt and the SNDA triangle

Recorded debt is where the county layer speaks in dollars, and it speaks almost exclusively about operators. Figure 2 compares the largest recorded positions. The fullest single-county stack is QTS in Prince William: deeds of trust totalling USD 4,646,166,000 of indexed consideration across 2022 to 2026, built in layers (2022 DC-5 trusts of USD 310.0M, USD 129.0M and USD 37.0M; DC2 at USD 680,190,000 in 2024 and USD 301,000,000 in 2025; the DC-5 trust of USD 1,490,476,000 on 1 April 2025; DC6 at USD 799,200,000 on 29 September 2025; the DC4 supplemental trust of USD 899,100,000 on 1 September 2026) (Prince William County Clerk of Circuit Court, 2026). The syndicate structure appears in the companion instruments: the 2025 DC-5 closing carries an assignment from Citibank, Barclays, Deutsche Bank and Goldman Sachs Bank to Bank of America, and on 11 June 2026 a ten-bank syndicate (Bank of America, BMO, Bank of Nova Scotia, Barclays Capital RE, Citi RE Funding, Goldman Sachs Mortgage Co, Morgan Stanley Mortgage Capital, RBC, TD and Wells Fargo) assigned its positions to Computershare Trust Co NA (instrument 202606110035316). DC3's lender was Sumitomo Mitsui Banking Corp, visible only through a UCC filing (202304270020579), assigned to Wells Fargo on 25 October 2024 and terminated on 3 December 2024: a lender that appears and disappears entirely within the UCC layer.

Refinancing sequences are the county layer's distinctive contribution, because the release is recorded alongside the replacement. Vantage OH11's mortgage of 17 October 2024 to Wells Fargo (USD 3,100.0M indexed) was released on 17 April 2025 and replaced the same day by a First Citizens

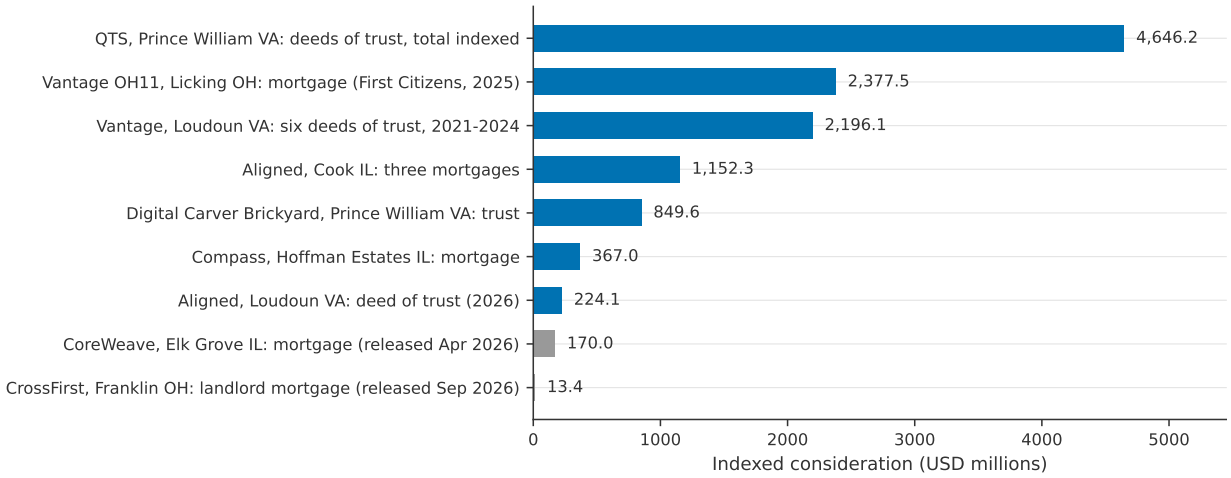

Figure 2. Recorded mortgage debt: largest indexed positions in the county record

Source: County recorder pulls (Prince William County Clerk of Circuit Court, 2026; Licking County Recorder, 2026; Loudoun County Clerk of Circuit Court, 2026; Cook County Recorder of Deeds, 2026; Franklin County Recorder, 2026). Note: Indexed consideration is the recorded face amount, not a drawn balance; sequential instruments may refinance the same facility and the bars are not additive across borrowers or dates. The Vantage Loudoun bar sums six deeds of trust listed in the pull (USD 802.2M, 520.0M, 400.0M, 300.0M, 98.89M and 75.0M) and excludes a USD 1,483.8M modification indexed against two Vantage entities, counted once in the workpapers and excluded here to avoid attributing one facility to a sum. Grey bars are facilities released in 2026. The CrossFirst bar (USD 13.4M) is a landlord-side loan, included because it is the only recorded mortgage behind a hyperscaler tenancy in its county.

Bank & Trust mortgage of USD 2,377.5M with UCC filings and SNDAs (202505090008153-55) (Licking County Recorder, 2026). Aligned's Loudoun deed of trust of 19 March 2026 (USD 224,081,310) replaces a 2022 instrument whose modifications had already moved its face amount twice. CoreWeave's Elk Grove mortgage to GLAS USA LLC (USD 170.0M) was released on 23 April 2026 (Cook County Recorder of Deeds, 2026), the same GLAS that acts as agent on the Helios facility, a reminder that the agent layer recurs across structures. In Loudoun, one Vantage modification of USD 1,483.8M is indexed against both VA15 and VA16 LLCs; the register counts it once, and Figure 2 excludes it rather than guess its allocation.

The SNDA (subordination, non-disturbance and attornment agreement) is the instrument that ties the layers together, and it is the only recorded instrument that routinely names a hyperscaler tenant, its landlord and the landlord's lender in one document. Amazon's New Albany tenancy is recorded in exactly this way: SNDAs name Mizuho Bank Ltd with landlord Preylock New Albany LLC (2026), Webster Bank NA with Preylock (2022), and JPMorgan Chase Bank NA with landlord COI New Albany CMH7 LLC (2021), while Amazon itself records no mortgage (Licking County Recorder, 2026). The Dickens County SNDA (20250000427) is the document that first established the Helios chain, naming GLAS USA LLC as collateral and administrative agent under a credit agreement dated 15 August 2025, CoreWeave, Inc. as tenant and Galaxy Helios I LLC as landlord and borrower (Section 6.5). Meta's only Franklin County instrument is a subordination of lease to Computershare Trust Co NA (202410020102972, 2 October 2024, 14.749 acres): Meta leases in the county and does not own (Franklin County Recorder, 2026). The landlord-side loan behind that pattern is documented once in full: Tuttle Emerald Development LLC's mortgage to CrossFirst Bank (USD 13,401,000, 14 November 2022, Lot 1 Crosby Business Park, Dublin, Ohio) sits behind Amazon's Crosby lease, was subordinated in 2024, and was released in September 2026. The amounts are small against the bond layer; the information content is not, because the SNDA triangle (tenant, landlord, landlord's lender) is the recorded form of the structure that the lease layer hides.

6.4 The bond complex

Table 4 gives the note terms for the five project-level issues in the record. Three are 144A/Reg S placements with registered-fund holder data (Section 6.7); two are identified in reporting but have no located CUSIP and therefore no holder map. Figure 3 plots coupon against maturity for the bonds and for the ABS tranches that funds report with both attributes, and the pattern is a risk spread, not a tenor spread: hyperscaler-anchored SPV notes price at 6.581 to 7.534 percent for 19 to 23 years; the CoreWeave-anchored Helios notes price at 9.875 percent for five years; CoreWeave's own unsecured corporate paper prices at 8.50 to 9.75 percent for four to six years while its converts price at 1.75 percent coupon with equity optionality; and stabilized operator ABS tranches price at 2.165 to 5.909 percent out to 30 years. The market, in other words, prices the tenant and the structure, and funds hold the resulting spread in size.

The Beignet issue carries one complication that the table's single line hides. A second tranche (6.850 percent due 2049) is unverified in the record, and until it is confirmed USD 27,294M must not be cited as a single tranche. It also carries the record's most informative holder-market fact: at 30 September 2025, before the notes' stated issue date, 115 registered-fund series reported USD 7,488,230,000 of the issue under three placeholder identifiers (pseudo-CUSIP 990AAXQG4 and two further filer placeholders) (Observed, A). When-issued positioning at that scale is visible only because the bulk population, not a CUSIP-filtered sample, is the identification unit (Section 5). The N-PORT history extension (2024q1 to 2025q3, 41.3 million rows) returns zero hits for all core

Table 4. Project-level note issues in the record

Issuer (campus)	Coupon	Maturity	Seniority	Issue (USD M)
Beignet Investor LLC (Meta, Hyperion)	6.581%	30 May 2049	Senior secured, first lien	27,294
Sopaipilla Investor LLC (Meta, El Paso)	7.534%	30 Nov 2048	144A (seniority not stated)	12,550
Galaxy Helios Data Centers II LLC	9.875%	1 Aug 2031	Senior secured	3,507
Saline SPV (Related Digital Michigan; Oracle tenant)	7.500%	2045	Senior secured	14,000
Digital Drive SPV (unidentified; CoreWeave tenant)	9.25% (at 98.5, S&P BB-)	tenor unresolved	not established	1,100

Notes: All are Rule 144A placements (Beignet and Helios with Regulation S tranches); none has an EMMA official statement by construction. Sopaipilla issue size is grade C (register C10). Saline terms are from the KBRA presale via secondary reproduction (grade B); no CUSIP was found in free sources, so no holder mapping is possible. Digital Drive: the issuer SPV's legal name is unidentified in every source including CoreWeave's own filings; no CUSIP was found. The offering reports state a 5-year tenor while the workpapers also carry a due-2041 figure; the conflict is unresolved, so the figure marks the maturity as unresolved (Section 6.7, open question Q2). Source: Phase 2 holder-map memo and campus capital stacks (project workpapers); Beignet, Sopaipilla and Helios terms cross-checked against fund-reported titles in the bulk N-PORT file.

identifiers, so the holder time series for every issue begins with the 2025q4 filing quarter; there is no earlier baseline (U.S. Securities and Exchange Commission, 2026b).

The operator ABS complex is measured in the same population. Table 5 gives fund-reported holdings by issuer family at each series' latest report period. The families are all below the project SPV coupons at comparable or longer tenors: funds report an Aligned Data Centers Issuer tranche at 5.909 percent due 2056 (CUSIP 01627AAF5), Compass tranches at 4.897 percent due 2056 and 4.926 percent due 2050, Vantage tranches at 5.132 percent due 2055 and 2.165 percent due 2046, and QTS Fayetteville at 5.70 percent due 2036. These are fund-reported titles in the N-PORT microdata, not presale terms, and they are the desk's verification of the scatter in Figure 3.

Table 5. Operator ABS: registered-fund holdings by issuer family

Issuer family	Value (USD M)	Fund series
Aligned Data Centers Issuer LLC	609.1	175
Aligned International LP	1,388.8	16
Compass Datacenters family	1,018.9	191
QTS Fayetteville I	936.9	217
QTS ABS II	873.7	152
QTS ABS I	261.6	61
QTS Thunder	227.0	56
QTS BX CMBS	113.5	4
Retained Vantage (Datacenter Issuer)	438.1	142
Vantage 92212K family	670.1	148
STACK Issuer	455.7	138
Sabey	194.4	70

Notes: Bulk N-PORT population, each series at its latest report period in the 2025q4–2026q3 window; registered funds only. Vantage's foreign-borrower SPV rows are entirely non-USD (EUR 484,231,306 and GBP 437,021,979 across all periods) and have no USD-denominated total. CloudHQ 2026-1 (USD 1,400M sought) has no N-PORT footprint in the freeze window. Aligned's September 2026 inaugural ABS tranches (USD 1,050M A- term, USD 150M BBB term, USD 150M A- VFN) are not separately identifiable in the file. Source: Phase 2 holder-map memo (project workpapers).

CoreWeave's debt stack at 30 June 2026 is the record's fullest obligor-level picture (Table 6), and it is also the layer that must not be confused with the lease ledger. Total indebtedness is USD 35.6B of principal (recourse USD 31,405M net of discounts and issuance costs; non-recourse USD 3,663M) (CoreWeave, Inc., 2026b). The DDTL facilities are drawn against capacity that, summed as signed, is roughly three times the drawn amount; the 10-Q names MUFG and Morgan Stanley Senior Funding as the coordinating arrangers on the newer facilities and JPMorgan Chase Bank NA as administrative agent on DDTL 5.5. N-PORT funds hold USD 642.2M of DDTL V paper, which is a holder-side slice of the USD 3,100M DDTL 5.0 facility, not a facility size: the distinction between holder slices and obligor facilities is the most common misreading in this record and the paper maintains it in every table. The September 2026 2.875 percent converts (USD 4.2B, closed after full exercise of the USD 500M greenshoe) are post-period and post-measurement-date; they are in the stack for completeness and out of the ledger by definition.

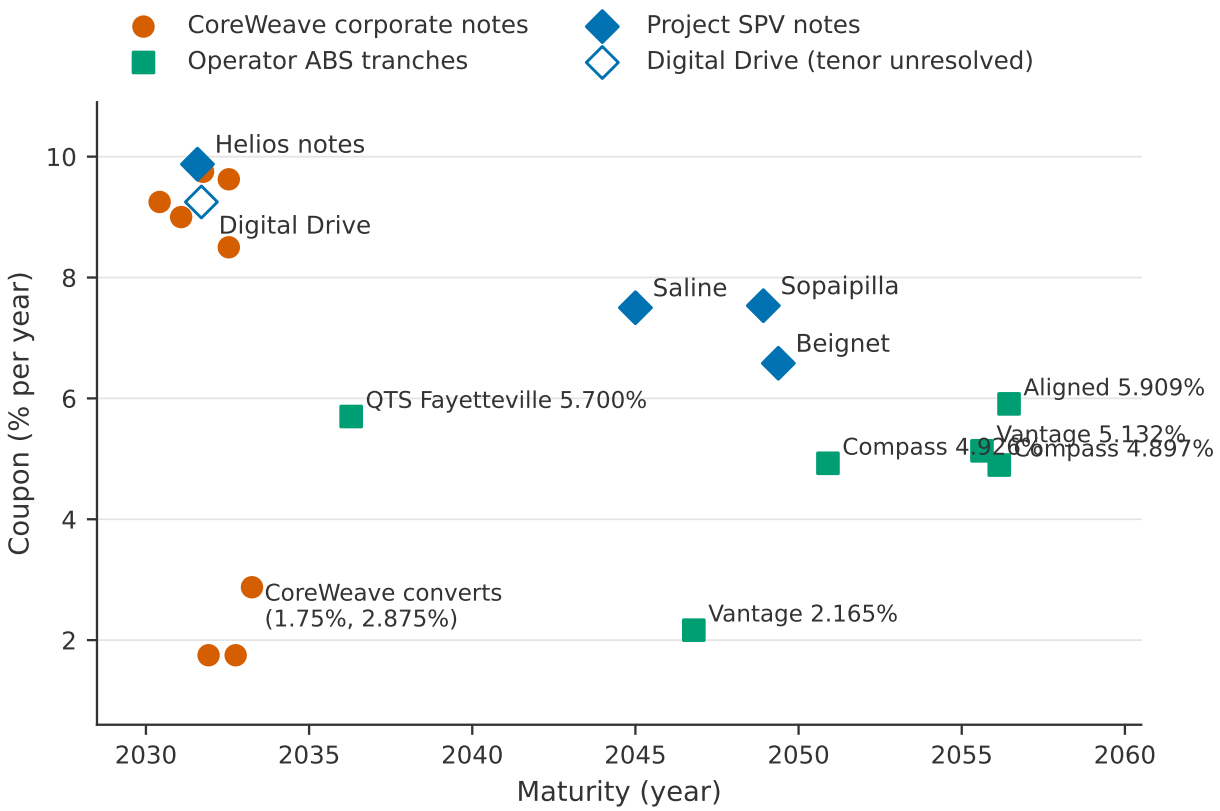

Figure 3. Coupon against maturity: project SPV notes, CoreWeave corporate notes and operator ABS tranches

Source: Bond terms in Table 4; CoreWeave ladder from Table 6; ABS coupons and maturities from fund-reported security titles in the bulk N-PORT file (verified row-by-row; the QTS Thunder 5.42 percent title carries no maturity and is excluded). Note: Digital Drive is shown as an open marker because its maturity is unresolved in the record (offering reports state a 5-year tenor; a due-2041 figure also appears in the workpapers); the marker is placed at the reported 5-year tenor. The CoreWeave converts sit at coupon, not yield. Figure data: data/fig6_coupon_maturity.csv.

Table 6. CoreWeave debt stack at 30 June 2026 (principal, USD millions)

Facility / issue	Signed	Capacity	Outstanding
Delayed-draw term loans			
DDTL 1.0 (Mar 2028, 15% effective)	Jul 2023	2,300	1,300
DDTL 2.0 (Aug 2030, 11%)	May 2024	7,600	3,190
DDTL 2.1 tranche (Mar 2031, 9%)	Sep 2025	3,000	3,000
DDTL 3.0 (Aug 2030, 9%)	Jul 2025	2,600	2,215
DDTL 5.0 (Nov 2031, 9%)	May 2026	3,100	1,101
DDTL 4.0 (Mar 2032, 7%; non-recourse)	Mar 2026	8,500	2,837
Senior and convertible notes			
9.25% senior notes due Jun 2030		2,000	2,000
9.00% senior notes due Feb 2031		1,750	1,750
9.75% senior notes due Oct 2031		2,750	2,750
9.625% senior notes due Jul 2032		1,250	1,250
8.50% EUR senior notes due Jul 2032		2,279	2,279
1.75% convertible senior notes due Dec 2031		2,588	2,588
1.75% convertible senior notes due Oct 2032		4,000	4,000
2.875% convertible senior notes due Apr 2033	Sep 2026	4,200	post-period
Total indebtedness, principal			35,600

Notes: Outstanding is the 10-Q Note 10 principal at 30 June 2026; capacities are as signed. DDTL 2.0 capacity is collateral-conditioned. The EUR notes are FX-hedged under cross-currency interest-rate swaps. DDTL 5.5 (capacity USD 2,600M, signed 7 August 2026) and the 2033 converts are after the measurement date and after the quarter end; the 10-Q table predates them. OEM and software-license financing arrangements (recourse USD 4,220M; non-recourse USD 882M) and the Magnetar loan (USD 189M) are part of the USD 35.6B total but are obligor debt of the same class, not campus-level facilities, and are not rows in this table. Source: CoreWeave, Inc. (2026b), Note 10; DDTL signing dates and arrangers from the Phase 2 EDGAR pull (project workpapers); 2033 converts from CoreWeave, Inc. (2026c).

6.5 Case study: the Helios Credit Agreement

The Helios facility is the one bank loan in the record documented from the county index to the credit agreement's covenants, and the sequence is worth following because it shows what each layer can and cannot say. The Dickens County SNDA of August 2025 (instrument 20250000427) named the borrower (Galaxy Helios I LLC), the initial lender (Deutsche Bank AG New York Branch), the administrative and collateral agent (GLAS USA LLC) and the tenant (CoreWeave, Inc.), and stated no amount anywhere (TexasFile, 2026). The amount is in the filings: the credit agreement dated 15 August 2025 is a USD 1,400M senior secured term loan facility (single facility, not split lines and tranches), filed as Exhibit 10.1 to Galaxy Digital's Form 8-K/A (Galaxy Digital Inc., 2025). Table 7 gives the terms; Figure 4 gives the draw schedule reported in the periodic filings.

Table 7. The Helios Credit Agreement: terms

Term	Value
Facility	USD 1,400M senior secured term loan (single facility)
Borrower	Galaxy Helios I LLC (wholly owned subsidiary of GDH LP)
Initial lender	Deutsche Bank AG, New York Branch (also calculation agent, lead arranger, joint lead arranger, mandated lead arranger, lead bookrunner, syndication coordinator)
Agents	GLAS USA LLC, administrative agent and collateral agent
Agreement date / maturity	15 August 2025 / 15 August 2028
Pricing	1-month Term SOFR (floor 2.5%) + 4.75% per annum
Covenants	Minimum debt service coverage ratio 1.40 post-Stabilization; maximum loan-to-cost 80%
Security	Not secured by any assets of Galaxy Digital (per filed excerpts)
Prepayment	Permitted in whole or part subject to a Prepayment Premium
Use of proceeds	Construction and development of the Helios data center campus, Dickens County, Texas
Drawn (Notes payable)	USD 433.5M at 30 Sep 2025; USD 878.0M at 31 Dec 2025; USD 1,100.0M at 31 Mar 2026; USD 1,300.0M at 30 Jun 2026

Notes: The agreement itself carries redacted fee and margin schedules ([***] redactions for information the registrant treats as confidential); covenant detail beyond the filed summaries was not harvested. Amounts in the county record are absent by construction, not by omission. Source: Galaxy Digital Inc. (2025); drawn amounts from Galaxy Digital's 10-Q filings and FY2025 10-K (Galaxy Digital Inc., 2026a,b).

The agreement sits inside a larger campus financing that the filings bound from three sides. The lease side: Galaxy's filings give the phase structure (initial lease, 133 MW critical IT, April 2025; Phase II, plus 260 MW, August 2025; Phase III, plus 133 MW, January 2026; 526 MW contracted in total; ERCOT-approved capacity over 1.6 GW with 830 MW uncontracted), and Galaxy's July

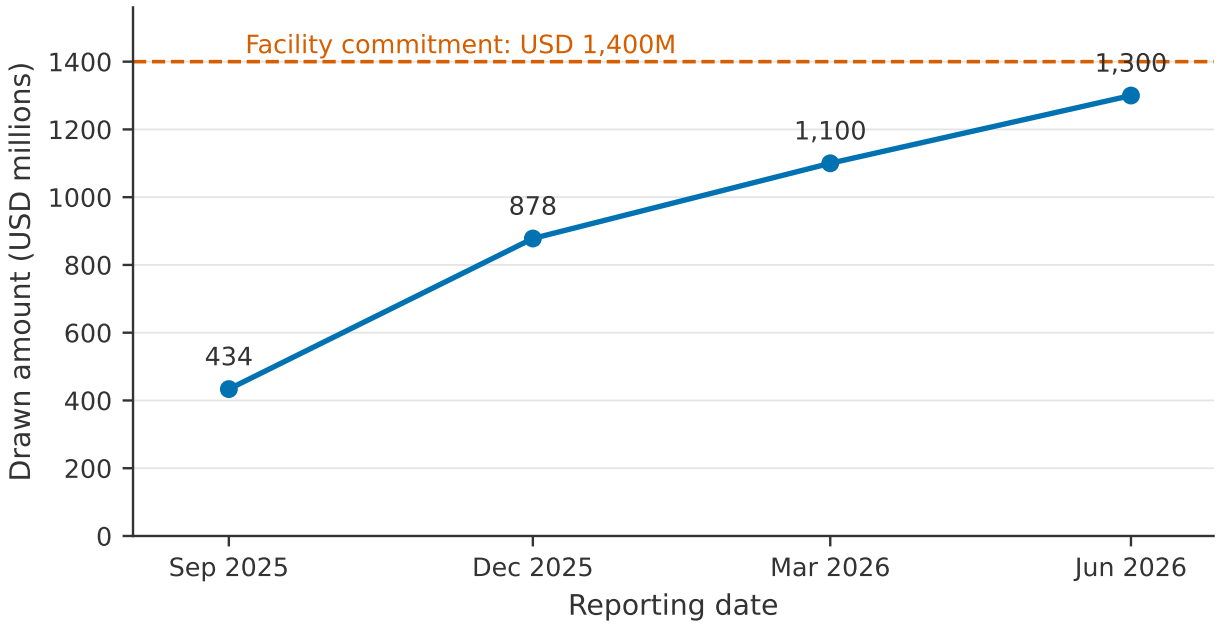

Figure 4. Helios facility: drawn balance against the USD 1,400M commitment
Source: Galaxy Digital 10-Q filings and FY2025 10-K (period-end Notes payable). Note: Points are quarter-end drawn balances; the commitment line is the facility ceiling, not a forecast. Figure data: data/fig3_helios_draws.csv.

2026 investor presentation states minimum contracted payments of USD 10,400M for Phase II (an offering document, not a periodic filing; no filed lease exhibit on either side contains a rent table) (Galaxy Digital Inc., 2026c). The notes side: Galaxy Helios Data Centers II LLC issued USD 3,507M of 9.875 percent senior secured notes due 2031 in July 2026 (priced 23 July at 99.5, closed 28 July), with Galaxy Helios II LLC as guarantor, BNY Mellon confirmed as trustee and collateral agent under the indenture in the Q2 2026 10-Q, and an uncapped completion guarantee from GDH LP. The property side: the Dickens County appraisal district carries the campus at USD 237,420 of land only. The three quantities (bank debt, notes, and land value) differ by orders of magnitude because they measure different things: construction draws, the second phase's bond financing, and a tax roll. The paper's method keeps them in separate columns for exactly that reason.

6.6 The timeline of expansion

Figure 5 places the financing layers on one clock, and Appendix E tabulates the full chronology (56 dated events; the dataset is data/chronology.csv). Three patterns stand out. First, land leads: the assembly wave for the current buildout begins with Google's Montauk acquisition in December 2018 and QTS's New Albany purchase in December 2023, and the two largest hyperscaler deed transfers in the record (Amazon in Prince William, November 2025, and Loudoun, March 2026) fall inside the period when the bond layer is already at full scale. Second, recorded debt builds in place: the QTS Prince William stack runs continuously from the 2022 DC-5 trusts to the September 2026 DC4 supplemental trust, and the 2025 refinancings (Vantage OH11 in April; Aligned Loudoun in March 2026) replace lenders without changing tenants, which is the county layer detecting the bank market's repricing of the same assets. Third, the market layers arrive in sequence: CoreWeave's

DDTL program opens in July 2023 and renews at rising capacity (USD 2,300M in 2023 to USD 8,500M of capacity in the 2026 DDTL 4.0); the Helios bank facility closes in August 2025, four months after the initial lease; the project SPV notes follow in 2026 (Saline in April, Helios in July, Sopaipilla in July, Digital Drive in September), and Beignet's funding was pre-positioned by registered funds a quarter before its stated issue date. The chronology shows the structure's shape: bank debt under construction, bonds at completion, and lease obligations signed before any of it is recorded anywhere an outsider can read.

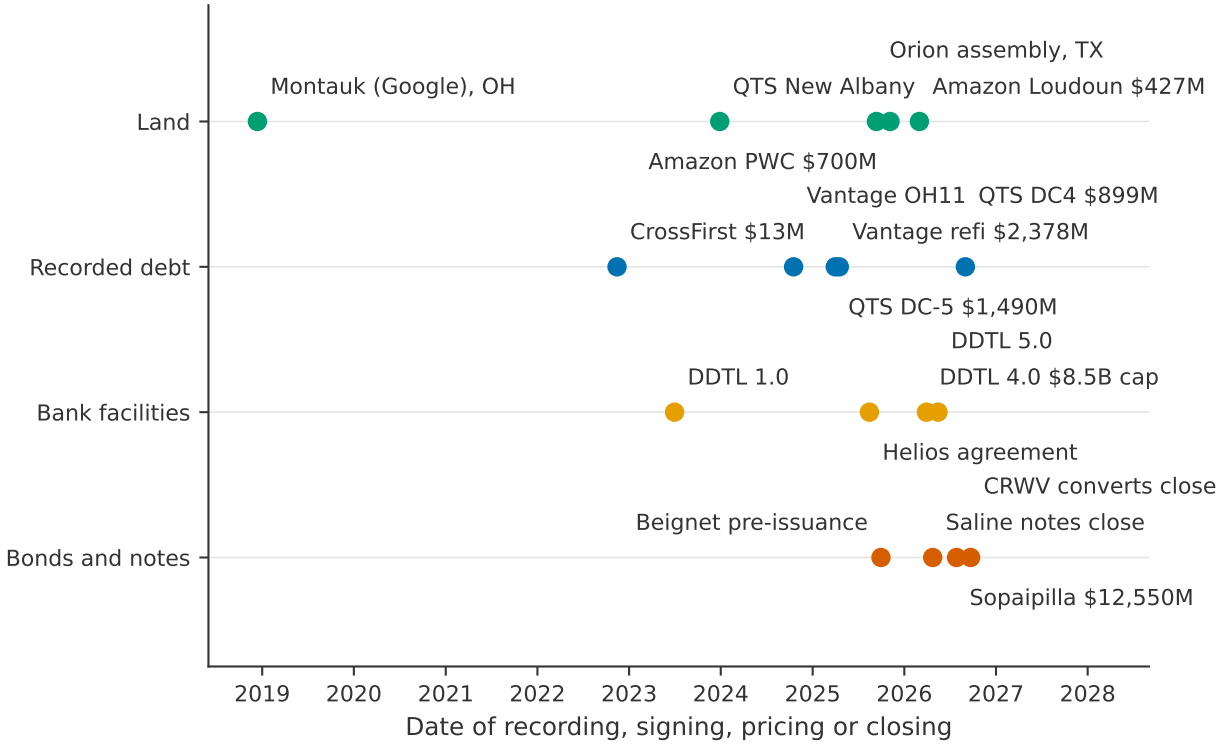

Figure 5. Selected financing events by layer, 2018 to 2026
Source: Appendix E (chronology dataset, data/chronology.csv). Note: Amounts in labels are the figures stated in the source for that event (deed consideration, indexed consideration, facility capacity or commitment). Two events from the chronology (DDTL 5.5 signing, August 2026; Jupiter deeds of trust, November 2025) are omitted from the figure for legibility and appear in the table.

6.7 The holders

Table 8 and Figure 6 give the registered-fund slice of each project issue. The variation (36.5 percent for Beignet against 3.33 percent for Sopaipilla) is the finding: both are Meta-anchored 144A SPV notes, and the difference between them is the holder base, not the structure. The visible Beignet holders are two complexes: PIMCO (106 funds, USD 6,663.4M, anchored by PIMCO Income Fund at USD 4,185.4M) and BlackRock (43 funds, USD 1,047.5M). Sopaipilla's visible base is PGIM-led (USD 102M across the complex; PGIM Total Return Bond Fund USD 76.3M). Two residuals must not be merged: about USD 17.3B of Beignet is invisible to N-PORT, and press reporting leaves about USD 6B unaccounted after the PIMCO and BlackRock anchors (grade C); they are measured against different denominators and the paper keeps them separate.

Table 8. Holder visibility: registered funds against issue size

Issue	Issue (USD M)	Funds-visible (USD M)	Visible share	Fund series
Beignet (CUSIP 076912AA2)	27,294	9,950.1	36.5%	407
Sopaipilla (CUSIP 83577VAA8)	12,550	418.2	3.33%	104
Helios notes (CUSIP 36322DAA4)	3,507	184.4	5.26%	70

Notes: Governing bulk-pass figures (each series at its latest report period in the freeze window). The Beignet denominator assumes the verified tranche is the issue; see the second-tranche caveat in Section 6.4. An extract-level method based on each series' latest report (Appendix B) returns lower aggregates (Beignet USD 9,574.7M across 380 series) because 1,154 of the 11,997 hit rows carry a blank series identifier that the bulk pass resolves by name; the governing figures are these. N-PORT covers SEC-registered funds only; a low visible share is a statement about the registered-fund slice, not about total ownership. Source: Phase 2 holder-map memo (project workpapers), bulk N-PORT population.

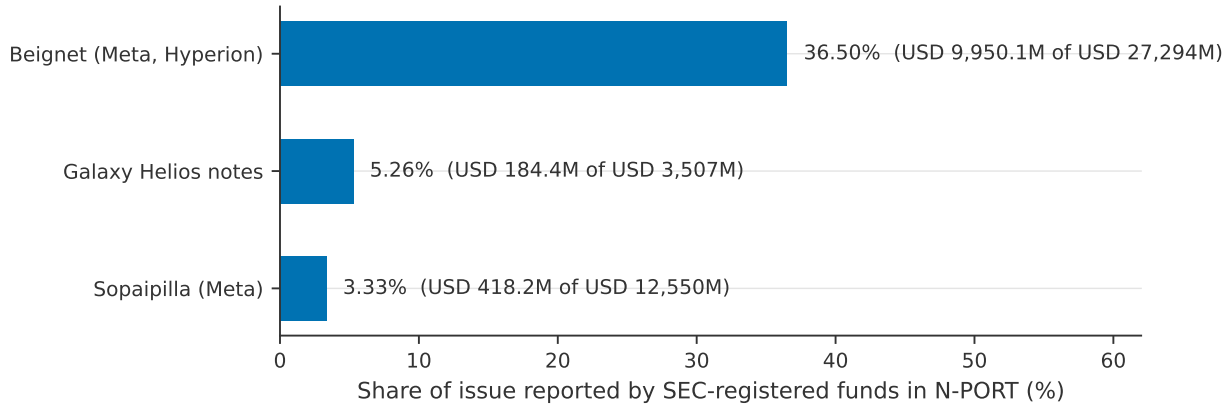

Figure 6. Share of each project issue reported by SEC-registered funds

Source: Table 8. Note: The complement of each bar is not "unowned"; it is owned by holder classes outside Form N-PORT (insurers, private funds, bank portfolios, offshore vehicles), of which only the insurer class can be pointed to by elimination (Section 6.7). Figure data: data/fig2_holder_visibility.csv.

Pensions. Pension exposure to the buildout runs through operator platforms and funds, not through hyperscaler project SPVs: no pension commitment to any Beignet, Sopaipilla or Helios vehicle appears anywhere in the record (Observed, B). Sized commitments are platform commitments (CalSTRS USD 300M to IPI Partners III; NYSCRF USD 300M to the Principal Data Center Growth & Income Fund; CPP Investments about USD 1.3B to Ares Japan DC Partners I, USD 1.75B to an EQT AI infrastructure vehicle, and C$225M as 50 percent of a Cambridge, Ontario construction loan). The only system publishing a full security-level file, Oregon's OPERF, holds operator ABS in size (Vantage USD 14.3M par in 2025, up from USD 7.77M; Aligned USD 9,655,000; STACK USD 6,015,000; QTS USD 7,673,138 in total) and holds none of Sopaipilla, Beignet, Galaxy Helios or CoreWeave in either the 2024 or the 2025 edition (Oregon State Treasury, 2025). Documented nulls for data-center-specific sized commitments cover Texas TRS, Texas ERS, WSIB and OPERF; OTPP co-owns Compass Datacenters with Brookfield with the stake and dollars never disclosed.

The insurer layer. No verified insurer holding of Sopaipilla, Beignet or Helios exists anywhere in the record. The only route is NAIC Schedule D by CUSIP through paid vendors, which this study does not cross (Section 7); seven state insurance-department portals were exhausted, and the holding-company 10-Ks of MetLife, Prudential, AIG and Athene contain zero mentions of Beignet, Pelican Leap or Hyperion. The correct statement is elimination, not attribution: the insurer class is the largest component of Beignet's N-PORT-invisible residual that the record can point to, and no insurer position is asserted. The only insurer names in the county record appear on the other side of the structure, as landlord-side lenders: American General Life Insurance Co and Variable Annuity Life Insurance Co are agreement counterparties behind Amazon tenancies in Prince William County.

BDCs and private credit marks. Business development companies give the only priced private-credit positions in the record, all grade A from latest 10-Ks: Carlyle's CGBD holds USD 60.5M of total CoreWeave exposure (CAC II loans at SOFR + 9.62 percent; CAC IV loans at SOFR + 6.00 percent; USD 14.8M unfunded); Ares' ARCC holds a Retained Vantage first-lien position (9.50 percent fixed, due December 2031; USD 40.8M funded and USD 155.1M unfunded, originated December 2025, with no tenant or campus disclosed); Blue Owl Technology Finance Corp holds USD 131.7M across VCI Asset Holdings first-lien loans (10.00 percent) and equity, a position this paper reconstructs as Blue Owl's participation in the Apollo-led Valor financing for xAI infrastructure, an identification from structure and timing that the filing itself does not name. OBDC and BXSL show no AI-infrastructure SPV positions in their latest 10-Ks. Apollo's manager statements place its deployment into next-generation infrastructure above USD 40B since 2022; that is a manager statement, graded as such, not a position.

Entity identity. The Legal Entity Identifier registry is a partial map. Of 32 entities checked, five have LEIs (Galaxy Helios I LLC and the four Red Chiles aggregators for Project Jupiter), and the documented no-LEI nulls include the Sopaipilla and Beignet issuer names, Yucca Growth, Wurldwide LLC, Roadrunner Leap LLC, Pelican Leap and BorderPlex (Global Legal Entity Identifier Foundation, 2026). Only four parent relationships are reported in the whole set, and Vantage Data Centers LLC reports no parent to GLEIF despite its known DigitalBridge and Silver Lake ownership. Form D is thinner still: 216,921 issuer rows return five matched filings and 14 rows, all aggregator-REIT feeders or namesakes (the SI NVA filings behind STACK campuses are USD 500,000 and USD 875,000 filing-level amounts), and 16 named SPV families are explicit Form D nulls. The SPVs that carry the largest financings in this paper file nothing in the two registries a researcher reaches for first.

6.8 The county inversion

Table 9 standardizes the county finding across the five counties where both hyperscaler and operator records were pulled in full. The pattern is uniform. The hyperscaler's county footprint is deeds (cash consideration) and, at most, agreements and SNDAs that name it as tenant; the operator's footprint is the mortgage stack. The financing risk of the buildout, as the recorded layer measures it, sits with the operators and their lenders, while the hyperscaler's obligation sits in the one layer (the lease) that no recorder holds. The inversion is not that hyperscalers do not borrow; it is that hyperscaler borrowing is corporate and unsecured by the campus, while operator borrowing is campus-secured and recorded, and the lease that connects the two has no public instrument at all.

Table 9. The county inversion: hyperscaler record against operator record, by county

County	Hyperscaler record	Operator record
Loudoun VA	Amazon: 15 deeds, about USD 1,290M; no deed of trust. Microsoft: 2 deeds; no financing instrument.	Vantage: six deeds of trust, USD 2,196.1M (indexed sum). Aligned: USD 224.1M deed of trust (2026) replacing a repeatedly modified 2022 facility.
Prince William VA	Amazon: 20 deeds, about USD 1,790M; no deed of trust. Microsoft: 6 deeds, USD 592.5M; no financing instrument.	QTS: deeds of trust totalling USD 4,646.2M. Digital Carver Brickyard: USD 849.6M trust.
Licking OH	Amazon: no mortgage; tenancy is recorded in SNDAs naming Mizuho, Webster and JPMorgan Chase as landlord-side lenders. Intel: vehicle-held land, no mortgage or lease.	Vantage OH11: Wells Fargo USD 3,100.0M (2024) replaced by First Citizens USD 2,377.5M (2025).
Franklin OH	Amazon, Microsoft: parcels held, no mortgages. Google: campus held by Montauk vehicle; no mortgage or lease.	QTS: USD 29.25M cash purchase, no mortgage. CrossFirst: USD 13.4M landlord-side mortgage behind an Amazon tenancy (the exception that shows the rule).
Cook IL	Microsoft: land deeds.	Aligned: three mortgages, USD 1,152.3M. Compass: USD 367.0M mortgage. CoreWeave (Elk Grove vehicle): USD 170.0M mortgage, released April 2026.

Notes: Amounts are deed consideration (hyperscaler columns) and indexed consideration (operator columns), as defined in Section 4. "No deed of trust" and "no mortgage" are covered nulls from full party-name pulls (Section 5). Source: Loudoun County Clerk of Circuit Court (2026); Prince William County Clerk of Circuit Court (2026); Licking County Recorder (2026); Franklin County Recorder (2026); Cook County Recorder of Deeds (2026).

7 Limitations, access and corrections

7.1 Falsifiability

Three observations would overturn this paper's central claims. First, production of a recorded instrument in any covered county stating the rent of a hyperscale campus lease would falsify the claim that no county record states lease dollars; the pulls were executed party-name by party-name over each portal's full date range, so a single such instrument is decisive against it. Second, an EMMA official statement, or Section 13(f) eligibility, for any of the core project issues would falsify the construction argument about the holder window. Third, a re-run of the N-PORT population on a later bulk freeze that moves a governing holder figure beyond its rounding would falsify the holder measurement; Section 5 specifies the method so that the re-run is mechanical. This is a retrospective analysis; there was no pre-registered plan.

7.2 Limitations

Coverage is uneven by construction and the unevenness is reported, not smoothed. Of 348 coverage cells, 155 were not attempted in Phase 1; the appraisal category in particular stands at 9 findings and 15 not attempted, so campus comparisons that depend on assessed values are strongest for Ohio, Virginia and Texas and thin elsewhere. The N-PORT freeze (filings through about 30 September 2026) means September 2026 issues (Aligned's inaugural ABS; CloudHQ 2026-1) are measured before their holder bases are observable. Two figures carry grade C wherever they are used: Sopaipilla's USD 12,550M size and Project Jupiter's approximately USD 18,000M bank facility. The Saline attribution is a proxy by construction (Section 6.1). The lease ledger's basis is the Kilambi Research (2026a) construction; issuer filings aggregate the same obligations differently, and the NVIDIA line carries an unresolved USD 2.3B definition gap (register D3). The insurer layer is unmeasured, not measured at zero: the study's no-payment rule closes the only route, and the paper states the elimination result and stops there. Finally, the project SPV equity for Beignet is conflicted in the record (about USD 7B implied by the reported 80/20 joint venture against USD 2.2B implied by the AI CERTs total-capital figure), and neither figure is used in any total (register D1).

7.3 The access map

Table 10 condenses the access record. The project's rule was that walls are reported with their prices and not crossed: no payment was made for any source in this paper, and the free registered accounts used (Loudoun LISWeb, Prince William EagleWeb, Licking PaxWorld, TexasFile) were created for this project under the principal's authorization. Two technical blocks are recorded for what they are, retrieval failures rather than data nulls: the Cook County Assessor parcel universe exists on the Socrata platform (datasets nj4t-kc8j and pabr-t5kh) but its host was unreachable from this project's network, and the Washtenaw County GIS layer is dead with parcel values available only by a request-based ShareFile route. One free layer remains genuinely unharvested: Form 10-D servicer reports for data-center ABS are free on EDGAR and were never pulled (open question Q12).

Table 10. Access outcomes for the principal walls (condensed)

Source	Status	Terms as recorded
NAIC Schedule D (insurer holdings by CUSIP), via paid vendors	Paid; route closed by the project's no-payment rule	Price conflict in the record: one pass recorded USD 26.00 per complete annual statement and USD 4.25 per quarterly filing; the insurer workstream's own note states no dollar price. Both are carried here, unresolved.
Racine County, WI recorder (LandShark)	Paid	About USD 1,000 per year class
Ozaukee County, WI (Tapestry EON)	Paid	USD 5.95–8.95 per search plus USD 1–2 per printed page
Henrico County, VA recorder (Logan Systems)	Paid	Subscription via Clerk application; fee from the Clerk
Chesterfield County, VA recorder	Paid	USD 600.00 per user subscription
Richland Parish, LA (Clerk Connect)	Paid	Representative Louisiana pricing: 24-hour USD 20–25; 30-day USD 50–125; annual USD 600–750, plus USD 1.00/page (parish-specific terms unconfirmed)
TexasFile paid extras	Paid options, not purchased	Excel export USD 0.10/record; document summaries USD 1–4; previews USD 2; USD 1/page; bulk rolls USD 500/county
KBRA / S&P / Moody's presales	Registration or login wall	Content used at grade B via secondary reproduction where available (Saline, Beignet)
Delaware SOS amendment records	Paywalled	Entity histories and renames remain inference
TRACE	Paid / blocked	Fund valuations used as marks instead
Cook County Assessor parcel universe	Blocked (network)	Dataset exists; host unreachable from this network
Washtenaw County parcel values	Blocked	GIS hosts dead; values by request only
Shackelford County, TX (Stargate)	Blocked	Portal requires an account; unreachable

Notes: The full access map, including every county portal verdict, appraisal-layer route and registry, is in the Phase 2 access-map memo (project workpapers). Source: Phase 2 access map (project workpapers).

7.4 Corrections applied to the record

Phase 2 maintained a correction register over the project's own Phase 1 work, and the register governs every conflict in this paper. It holds 45-plus entries in six classes: brief-mandated corrections carried in from earlier reviews (9), internal inconsistencies in the earlier counterparty work (17), corrections produced by the expanded county research itself (10), unresolved conflicts carried openly (8), and the Phase 2 EDGAR resolutions (6). The load-bearing examples: the Jupiter 2025B series is USD 25,000M (an early pass read the four USD 6,250M purchaser caps as the series size); Sopaipilla is excluded from the 30 June ledger on timing, not merged into it; the Helios holder value that governs is the bulk-pass USD 184,436,810, not the sampled USD 189,030,470; the Henrico QTS position is 15 parcels at USD 1,960,325,500, superseding an earlier browser-pass estimate; and Beaver Dam Resolution 19-2026 concerns an Oppidan and CLOP Madison development in TID No. 7, not Meta in TID No. 10. The register also carries a quality-assurance finding about the work itself: several figures in intermediate workstream summaries (a facility split, a borrower name, a notes line) were not supported by the saved filing excerpts beneath them, were caught in Phase 2, and are recorded; the standing rule that excerpts govern over summaries is stated in Section 5 because of them.

8 Open questions

The open questions are ranked by materiality; each states what would close it.

1. **Q1. Saline's lease dollars.** The USD 14.00B Plausible figure is note principal standing in for four undisclosed leases. Closing it needs the KBRA presale's stated rent (behind a registration wall) or the notes' CUSIP (not found in free sources).
2. **Q2. Digital Drive's issuer.** The USD 1,100M notes' SPV is unidentified in every source including the tenant's own filings. Seven FOIA drafts prepared in Phase 1 remain unfiled; filing them is a principal decision, not a research step.
3. **Q3. Beignet's residuals.** About USD 17.3B N-PORT-invisible and about USD 6B unaccounted against press anchors, plus the equity conflict (register D1). The insurer route (Q6) is the largest single component; the gap may be permanent under the access rules.
4. **Q4. Recorded amounts for the largest facilities.** No recorded instrument states the amount or agent of the USD 38,000M Stargate package or the approximately USD 18,000M Jupiter facility.
5. **Q5. CoreWeave's presentation.** The filing total reconciles with the ledger and excludes the Helios lease; any future presentation must hold both facts together, as Section 6.1 does.
6. **Q6. Insurer Schedule D.** Closed by the no-payment decision; listed here because it bounds Q3.
7. **Q7. The Longhorn Power Plant.** The Abilene power lot (USD 467.2M appraised) has no identity in EIA-860 or EIA-860M as of August 2026 (U.S. Energy Information Administration, 2026). Free routes remain: EIA-923, ERCOT's GIS under operator names, PUCT dockets (which already name Crusoe loads in Armstrong County).
8. **Q8. Cook County parcel universe.** Retrieval failure from this network; retry from a different network.

9. **Q9. Washtenaw parcel values.** No free export exists; the request-based route is untried.
10. **Q10. UCC-1 central filings.** Zero searches were executable (Texas SOSDirect is paid; Wisconsin and New Mexico portals unreachable). County-index UCCs are partial substitutes only.
11. **Q11. Unresolved numeric conflicts.** The NVIDIA definition gap (D3), the Jupiter and Frontier acreage conflicts (D4, D5), the Port Washington TID arithmetic (D6: items sum to USD 453M against USD 458M stated) and the Oracle CDS conflict (D7) need footnotes in any reuse of this record.
12. **Q12. Unharvested free layers.** Form 10-D servicer reports for data-center ABS; ABS presale tenant schedules (login walls); the seven FOIA drafts; the full SoftBank Yuho review, which needs an EDINET API key (free signup, principal only).
13. **Q13. Beignet's possible second tranche.** A 6.850 percent due-2049 tranche is unverified; until resolved, USD 27,294M is not a single-tranche figure.
14. **Q14. Coverage re-scoring.** The 348-cell matrix stands at pre-expansion counts for most categories; re-scoring is mechanical work deferred past this paper.

9 Conclusion

This paper set out to map a financing structure and ended up measuring the map's own resolution. At the land layer the record is complete to the parcel and the dollar. At the recorded-debt layer it is complete for the counties whose indexes state amounts, and it shows a clean division of labor: hyperscalers hold land for cash, operators hold the mortgages, and the two meet only in SNDAs and landlord-side loans. At the market layer the record is exact on size, coupon and tenor for every project issue, and exact on one bank facility down to its covenants, because one borrower had to file its credit agreement. At the holder layer the record is a slice whose width varies by issue (36.5 percent, 5.26 percent, 3.33 percent) and whose missing mass is identifiable by class (insurers and private vehicles) but not by name. At the lease layer, the layer where USD 1,165.00B of obligations sit, the record names counterparties for 3.3 percent, and the paper has shown that the remaining 95.5 percent is not hidden in the sense of concealed: it is unrecorded by design, in a disclosure regime that requires the obligation's total and nothing about its counterparty. A reader who wants to know who ultimately funds the AI buildout can learn a great deal from public records. This paper is the account of how much, and of exactly where the account stops.

Acknowledgments

Kilambi Research thanks the county clerks, recorders and appraisal districts whose free public portals carry most of this paper's evidence, and the Oregon State Treasury for publishing the only full security-level pension holdings file among the nine systems checked.

Production note. This paper was produced by Kilambi Research's quantitative research pipeline with AI assistance. All analysis was verified against source data. The Phase 2 correction register (Section 7) records the errors found in the project's own intermediate work and how each was resolved. Data availability: the chronology dataset and figure data are in the paper's data directory

(data/chronology.csv and data/fig*.csv); the securities inventory is Appendix B; the source archive (1,495 documents) is retained by Kilambi Research.

U.S. Energy Information Administration. Form eia-860 (2025) and eia-860m (august 2026) generator data. EIA bulk files; retrieved October 2026, 2026.

U.S. Securities and Exchange Commission. Form d bulk datasets, filing quarters 2023q1 to 2026q3. SEC bulk data downloads; 216,921 issuer rows, 2026a.

U.S. Securities and Exchange Commission. Form n-port bulk datasets, filing quarters 2024q1 to 2026q3. SEC bulk data downloads; 22,021,526 holding rows in quarters 2025q4–2026q3 and 41,348,748 rows in the 2024q1–2025q3 history extension, 2026b.

Washtenaw County Register of Deeds. Recorder index: Saline data center condominium agreements (docs 6800224-27) and related leases (docs 6796256-59). Free index; pulled October 2026, 2026.

A Data appendix: source inventory

Table 11. Principal sources by category

Category	Sources	Access
Issuer filings	SEC EDGAR: seven issuers; Galaxy Digital; CoreWeave; Applied Digital; BDCs (CGBD, ARCC, OTIC, OBDC, BXSL); public lessors	Free; declared identity
Fund holdings	Form N-PORT bulk, 2024q1–2026q3	Free bulk
Private placements	Form D bulk, 2023q1–2026q3	Free bulk
County recorders	Loudoun, Prince William, Licking, Franklin, Washtenaw, Doña Ana, El Paso, Cook, Jackson (MO), Armstrong, Childress, Hall, Dickens, Pecos, Borden, Milam and others	Free; four registered accounts
Appraisal and parcels	Franklin Auditor bulk; Taylor CAD; El Paso CAD; Dallas CAD; Licking GIS; WLIP V12 (WI); Prince William CAMA; Loudoun GeoHub; Henrico CAMA; Doña Ana ArcGIS	Free bulk or REST
Registries	GLEIF API (32 entities); Delaware SOS; OpenCorporates	Free; amendments paywalled
Power	EIA-860 and 860M; ERCOT GIS; PJM, MISO, SPP queues; PUCT dockets; El Paso Electric queue	Free
Ratings	KBRA (Saline), S&P (Beignet), Moody's (CloudHQ) presales	Walls; grade B via secondary
Pensions	Nine systems; Oregon OPERF full holdings file, 2024 and 2025 editions	Free
Insurers	Seven state DOI portals; holding-company 10-Ks; NAIC Schedule D via vendors	Free routes exhausted; paid route closed
Municipal disclosure	EMMA (null results by construction)	Free

Notes: The per-source registry (exact locator, access method, query parameters and baseline result for monthly diff re-checks) is maintained as a project file (hidden_files/SOURCE-REGISTRY.md) and is populated from the Phase 1 and Phase 2 reports. Source: Phase 2 access map (project workpapers).

B Securities inventory

B.1 Securities inventory, Table 1: N-PORT securities as filed

Table 12 reproduces the Phase 2 inventory of the bulk N-PORT hits file (11,997 hit rows; source quarters 2025q4 to 2026q3), grouped by (CUSIP, issuer, title, currency) exactly as filed. For each fund series, the table takes its row at that series' latest report date within the group. Governing holder totals for the four headline CUSIPs are the bulk-pass figures in Table 8; extract-level

aggregates here are floors and differ from the governing figures for the methodological reasons stated in Section 6.7.

Table 12. Securities inventory, Table 1: every distinct security in the bulk N-PORT hits file, grouped as filed. Principal sums cover PA (principal-amount) rows only. Sorted by latest-report value, descending.

B.2 Securities inventory, Table 2: workpaper securities with no N-PORT footprint

Table 13. Securities inventory, Table 2: securities in the workpapers that do not appear in the bulk N-PORT hits file.

Identifier	Issuer / issue	Amount	Holder status
U06930AA6	Beignet Investor LLC, Regulation S tranche, 6.581% senior secured notes due 30 May 2049 (same issue as 144A CUSIP 076912AA2 in Table 1)	$27.29B issue (Reg S portion not separately split in sources)	No registered-fund holders: zero rows in the bulk N-PORT hits file, matching the prior sweep (U06930AA6 appears only as repo collateral in N-MFP money-market filings). Offshore tranche; holder totals: no data.
NO CUSIP LOCATED	Saline Township, MI, senior secured notes; borrower/landlord stack incl. RD Michigan Property Owner I LLC and Related Digital; four triple-net leases to Oracle America Cloud Services LLC, guaranteed by Oracle Corporation	$14B notes	No CUSIP located, so no N-PORT pull is possible. Holder totals: no data.
NO CUSIP LOCATED	Digital Drive, Richmond, VA, notes for the 76 MW CoreWeave campus (Blue Owl affiliates, Cedarwood Investment Group LP, PowerHouse Data Centers LLC sponsors; Goldman Sachs bank group); 5-year, priced 23 Sep 2026 at 98.5, yield 9.25%, S&P BB-	$1.1B notes	Issuer SPV unidentified in every program source; no CUSIP located. Holder totals: no data.
NO CUSIP LOCATED	Elk Grove Village Property LLC (Prime Data Centers subsidiary), CoreWeave junk bonds, Elk Grove Village, IL; Santander running the sale; 15-year CoreWeave lease	$900M facility (upsized from ~$850M in May 2026 reporting)	No CUSIP located. Holder totals: no data.
IRB Series 2025A	Project Jupiter, Dona Ana County, NM industrial revenue bonds Series 2025A; obligor Yucca Growth Infrastructure, LLC; depositary BOKF, NA; microgrid / power / battery storage	$15B	Affiliate-purchased (purchaser: Yucca Growth Infrastructure Purchaser, LLC): no market holders, no-data note. Conduit tax-abatement series under the $165B Ordinance 367-2025 ceiling, not market debt.
IRB Series 2025B (B-1 to B-4)	Project Jupiter, Dona Ana County, NM IRB Series 2025B; obligors Red Chiles A/B/C/D, LLC; depositary Citibank, N.A.; tenant Green Chile Ventures LLC	$25B ($6.25B x 4)	Affiliate-purchased (purchasers: Red Chiles Sub A/B/C/D, LLC): no market holders, no-data note.
IRB Series 2025C (C-1 to C-4)	Project Jupiter, Dona Ana County, NM IRB Series 2025C; obligor / company Green Chile Ventures LLC; depositary BNY Mellon Trust Co, N.A.	~$125B ($124,999,925,000 plus $25,000 x 3)	Purchaser is Oracle America, Inc. (affiliate): no market holders, no-data note.
AUTHORIZED, NOT ISSUED	Project Mica, Port Authority of Kansas City, MO (Port KC) taxable revenue bonds for the Google Kansas City campus; authorised by unanimous board vote 28 Jul 2025 (Chapter 100-style conduit; 25-year 75% property-tax exemption)	Up to $10B (authorisation ceiling)	Authorized-not-issued: no security exists, no series issued in the record, EMMA search returned zero Mica records. No holders by construction.

Table 13 (continued)

Identifier	Issuer / issue	Amount	Holder status
SOUGHT, PRE-ISSUANCE	CloudHQ Secured Data Center Revenue Term Notes 2026-1, issuers Iskandar Enterprise LLC and Kaveh Enterprise LLC (LC1A/LC2 campus, Ashburn, VA); Guggenheim Securities structuring agent; ARD Apr 2031, final maturity Apr 2056	$1.4B sought	Sought, pre-issuance in the freeze window: zero CloudHQ rows in the N-PORT hits file; no CUSIP or holders located.
ABS 2026, A- term tranche	Aligned Data Centers, inaugural ABS (Sep 2026), Guggenheim sole structuring adviser; Deutsche Bank, Goldman Sachs, Wells Fargo joint bookrunners; S&P A-	$1.05B	Not separately identifiable in the hits file: the Aligned rows in Table 1 (01627A* family) are the earlier 2021 to 2026-1A shelves as titled by filers, and no tranche is titled as this inaugural tranche. Holder totals: no data.
ABS 2026, BBB term tranche	Aligned Data Centers, inaugural ABS (Sep 2026), BBB tranche; same structuring/bookrunner group as above; S&P BBB	$150M	Not separately identifiable in the hits file (see A- tranche note). Holder totals: no data.
ABS 2026, A-VFN tranche	Aligned Data Centers, inaugural ABS (Sep 2026), A- variable funding note tranche; same structuring/bookrunner group as above	$150M	Not separately identifiable in the hits file (see A- tranche note). Holder totals: no data.
NO CUSIP LOCATED	Nscale, pre-IPO convertible loan notes, Third Point-led, 25 Sep 2026 ($2.36B at close plus $1B NVIDIA tranche due mid-Nov 2026)	$3.36B convertibles	Private convertibles: zero Nscale rows in the N-PORT hits file; no CUSIP located. Holder totals beyond the named leads: no data.
PRIVATE BONDS, GRADE C	Sines Campus DC01, Portugal, private bonds: EUR 171M (Sep 2025), EUR 40M (Mar 2026), EUR 90M (Sep 2026)	EUR 301M in total	Grade C record only: zero Sines rows in the N-PORT hits file; no CUSIP located. Holder totals: no data.
AUTHORIZED, NO ISSUANCE EVIDENCE	City of Independence, MO, Chapter 100 taxable industrial development revenue bonds (Nebius campus); City Council Bill 26-019 / Ordinance 19791 passed 2 Mar 2026; 98% real-property and 90% personal-property abatements over 20 years	~$150.6B authorised (two series)	Authorisation only in the extracted record (grade C): no EMMA P-number or official statement located, no issued security or holders located.

B.3 Securities inventory, Table 3: Form D issuers

Table 14. Securities inventory, Table 3: every issuer row in the Form D bulk hits file (14 rows, 5 filings). Amounts are filing-level totals shared by co-issuers. These are equity and REIT feeder securities, not bonds.

Issuer	Filed	Accession	Offered / sold	Note
BG BorderPlex SPV, L.P.	29-SEP-2025	0000947871-25-000865	Indefinite / $0	Pooled investment fund, DE limited partnership; first sale yet to occur; exemptions 506(b) + 3(c)/3(c)(1). Name match only: the 'BG' sponsor is unidentified and no affiliation to the Jupiter BorderPlex entities is established; recorded as an unverified namesake.

Table 14 (continued)

Issuer	Filed	Accession	Offered / sold	Note
BorderPlex Digital Assets, LLC	20-FEB-2025	0002048625-25-000001	$20,555,000 / $20,555,000	506(b), DE LLC, industry 'Other Real Estate'; first sale 2025-01-31. Name matches the Jupiter structure's BorderPlex family (BorderPlex Manager, LLC is a verified Jupiter entity); this exact entity is not otherwise in the forensic record, so affiliation is name-based and flagged as such.
SI NVA02D-E Holdings REIT LLC	11-AUG-2026	0002149325-26-000002	$875,000 / $812,000 (filing-level, 7 co-issuers)	SI NVA aggregator-REIT family, Aug 2026 filing (primary issuer row); 506(b) + 3(c)/3(c)(7); first sale 2026-08-04.
SI NVA04A AGGREGATOR REIT LLC	11-AUG-2026	0002149325-26-000002	$875,000 / $812,000 (filing-level, 7 co-issuers)	Co-issuer in the Aug 2026 SI NVA aggregator filing; aggregator REIT, not a project SPV.
SI NVA04B AGGREGATOR REIT LLC	11-AUG-2026	0002149325-26-000002	$875,000 / $812,000 (filing-level, 7 co-issuers)	Co-issuer in the Aug 2026 SI NVA aggregator filing.
SI NVA05D AGGREGATOR REIT LLC	11-AUG-2026	0002149325-26-000002	$875,000 / $812,000 (filing-level, 7 co-issuers)	Co-issuer in the Aug 2026 SI NVA aggregator filing.
SI NVA05D AGGREGATOR FOREIGN REIT LLC	11-AUG-2026	0002149325-26-000002	$875,000 / $812,000 (filing-level, 7 co-issuers)	Co-issuer (foreign REIT) in the Aug 2026 SI NVA aggregator filing.
SI NVA06 AGGREGATOR REIT LLC	11-AUG-2026	0002149325-26-000002	$875,000 / $812,000 (filing-level, 7 co-issuers)	Co-issuer in the Aug 2026 SI NVA aggregator filing.
SI NVA06 AGGREGATOR FOREIGN REIT LLC	11-AUG-2026	0002149325-26-000002	$875,000 / $812,000 (filing-level, 7 co-issuers)	Co-issuer (foreign REIT) in the Aug 2026 SI NVA aggregator filing.
SI NVA05A AGGREGATOR REIT, LLC	20-MAY-2026	0002134683-26-000001	$500,000 / $500,000 (filing-level, 4 co-issuers)	SI NVA aggregator-REIT family, May 2026 filing (primary issuer row); 506(b) + 3(c)/3(c)(7); first sale 2026-05-07.
SI NVA05B AGGREGATOR REIT, LLC	20-MAY-2026	0002134683-26-000001	$500,000 / $500,000 (filing-level, 4 co-issuers)	Co-issuer in the May 2026 SI NVA aggregator filing.
SI NVA05C AGGREGATOR REIT, LLC	20-MAY-2026	0002134683-26-000001	$500,000 / $500,000 (filing-level, 4 co-issuers)	Co-issuer in the May 2026 SI NVA aggregator filing.
SI NVA05C AGGREGATOR FOREIGN REIT LLC	20-MAY-2026	0002134683-26-000001	$500,000 / $500,000 (filing-level, 4 co-issuers)	Co-issuer (foreign REIT) in the May 2026 SI NVA aggregator filing.
STACK NVA HOLDINGS REIT, LLC	23-JAN-2025	0002050608-25-000001	$125,000 / $125,000	STACK Northern Virginia aggregator REIT, earlier vintage; 506(b) + 3(c)/3(c)(7); first sale 2025-01-07.

C Campus capital-stack summary

Table 15. Campus capital stacks: standardized summary

Campus	Tenant	Land layer	Debt layer	Attrib. (USD B)
Hyperion (Richland Parish, LA)	Meta	Laidley LLC ground position; LED lease USD 732K/yr; Meta USD 12M option	Beignet notes USD 27,294M, 6.581%, 2049	12.31 Strong
El Paso (Statue)	Meta	Wurldwide LLC: 1,038.95 ac from City, USD 8.5M	Sopaipilla notes USD 12,550M, 7.534%, 2048	0 (post-period)
Saline (Washtenaw, MI)	Oracle	Index-level only; condo Docs 6800224-27	Notes USD 14,000M, 7.500%, 2045	14.00 Plausible
